

Envoy 20 WP

Type and composition:

Miticide contains 20 % w/w Tebufenpyrad in the form Wettable Powder (WP)

Mode of Action:

Non-systemic miticide active by contact and ingestion, inhibits the development of mite eggs.

Advantage and properties:

Envoy 20 WP: Non-systemic miticide active by contact and ingestion. Exhibits translaminar movement following application to leave, and thus inhibits the development of mite eggs oviposited on the undersides of leaves.

Envoy 20 WP: incompatible with other pesticide.

Envoy 20 WP: Non-phytotoxic to most plant species when used as recommended.

Envoy 20 WP: Slight toxicity to mammalian, highly toxic to fish and slightly toxic to bees, nontoxic to birds.

Application rate:

Crop	Pest	Rate of application/20L water	PHI (days)
Apple	red mite	10 g	7 days
Pear	red mite	10 g	7 days
Strawberry	Two spotted mite	15 g	3 days
Ornamental	Two spotted mite	10-20 g	-----
