

Denis

Type and composition:

Miticde contains 20 % w/v cyflumetofen in the form suspension concentrate (SC).

Mode of Action:

Non-systemic miticide active primarily by contact.

Advantage and properties:

Denis: Non-systemic miticide active primarily by contact .treated adults are completely paralysed within 24 h; also partly ovicidal, and any mites which hatch from egg die shortly afterwards.

Denis: does not have a negative impact on field population (predatory mite, common lacewing,...).

Denis: used to control European red mite, Two-spotted red mite.

Denis: incompatible with alkaline pesticide.

Denis: may cause allergic to skin toxic to aquatic organisms.

Application rate:

Crop	Pest	Rate of application/20L water	PHI (days)
Calamondin, grapefruit, lemon, kumquat, orange, pummelo	European red mites, Tow spotted red mite	20 ml	7 days
Apple , pear, quince, loquat	European red mites, Tow spotted red mite		7 days
Grapes	European red mites, Tow spotted red mite		14 days
Strawberry	European red mites, Tow spotted red mite		3 days
Tomato	European red mites, Tow spotted red mite		3 days
Peach,apricot,nectarine,almond	European red mites, Tow spotted red mite		7 days
