

Envoy

Type and composition:

Miticide contains 20 % w/w Tebufenpyrad in the form Wettable Powder (WP).

Mode of Action:

Non-systemic miticide active by contact and ingestion, inhibits the development of mite eggs.

Advantage and properties:

Envoy: Non-systemic miticide active by contact and ingestion. Exhibits translaminar movement following application to leave, and thus inhibits the development of mite eggs oviposited on the undersides of leaves.

Envoy: incompatible with other pesticide.

Envoy: Non-phytotoxic to most plant species when used as recommended.

Envoy: Slight toxicity to mammalian, highly toxic to fish and slightly toxic to bees, nontoxic to birds.

Application rate:

Crop	Pest	Rate of application/20L water	PHI (days)
Apple	red mite	10 g	7 days
Pear	red mite	10 g	7 days
Strawberry	Two spotted mite	15 g	3 days
Ornamental	Two spotted mite	10-20 g	-----
